2.5 Power factor correction

The power supply modules shall incorporate universal power input with active power factor correction, which shall reduce line harmonics in accordance with the EN 61000-3-2 standards.

PFC can reach the target of 95% @230V,full load.

\*\*\* Total output max : 380W \*\*\*

\*\*\* When conditions of both+5V/0A & +3.3V/0A, min load of 4A at +12V is a must.

When doing the cross regulation test(one output channel at high load and the other output channels at low load), it is requested to set the higher output channel at 80% max. of its spec., and the lower output channels at 20% max. of theirs.

3.2 Regulation

Output DC voltage	Line regulation
+5V	±50mV
+12V	±120mV
-12V	±120mV
+3.3V	±50mV
+5VSB	±50mV

### 3.3 Ripple and noise

#### 3.3.1 Specification

+5V	50mV (P-P)
+12V	120mV (P-P)
-12V	120mV (P-P)
+3.3V	50mV (P-P)
+5VSB	50mV (P-P)

#### 3.3.2 Ripple voltage test circuit

0.1uf is ceramic, the other is electrolytic capacitor.  
Noise bandwidth is from DC to 20Mhz

#### 3.4 Overshoot

Any overshoot at turn on or turn off shall be less than 10% of the nominal voltage value , all output shall be within the regulation limit of section 3.1 before issuing the power good signal of section 6.0.

#### 3.5 Efficiency

Power supply efficiency: 84% (Max)

##### NOTE:

(Any difference either on the DC output cable (i.e., length, wire gauge) or on the accurate of instruments will conclude different test result. It will affects output voltage and efficiency.)

#### 3.6 Remote on/off control

The power supply DC outputs (with the exception of +5VSB) shall be enabled with an active-low , TTL-compatible signal(“PS-ON”)  
When PS-ON is pulled to TTL low , the DC outputs are to be enabled.  
When PS-ON is pulled to TTL high or open circuited , the DC outputs are to be disabled.

## 4.0 Protection

### 4.1 Input (primary)

The input power line must have an over power protection device in accordance with safety requirement of section 8.0

### 4.2 Output (secondary)

#### 4.2.1 Over power protection (one unit)

The power supply shall provide over power protection on the power supply latches all DC output into a shutdown state. Over power of this type shall cause no damage to power supply , after over load is removed and a power on/off cycle is initiated , the power supply will restart.

Trip point total power min. 110% , max. 160%.

#### 4.2.2 Over voltage protection

If an over voltage fault occurs , the power supply will latch all DC output into a shutdown state before

+5V : 5.6V ~ 6.7V

+3.3V : 3.6V ~ 4.3V

+12V : 13.0V ~ 16.0V

#### 4.2.3 Short circuit

A: A short circuit placed on any DC output to DC return shall cause no damage.

B: The power supply shall be latched in case any short circuit is taken place at +5V,+3.3V,+12V,-12V output.

C: The power supply shall be auto-recovered in case any short circuit is taken place at +5VSB.
